

Mouse Alkaline Phosphatase (Germ type) /ALPG Protein

Cat. No. APE-MM103

Description

Source	Recombinant Mouse Alkaline Phosphatase (Germ type) /ALPG Protein is expressed from HEK293 with His tag at the C-Terminus. It contains Val19-Ser502.
Accession	P24823
Molecular Weight	The protein has a predicted MW of 53.64 kDa. Due to glycosylation, the protein migrates to 55-70 kDa based on Tris-Bis PAGE result.
Endotoxin	Less than 1EU per µg by the LAL method.
Purity	> 95% as determined by Tris-Bis PAGE > 95% as determined by HPLC

Formulation and Storage

Formulation	Lyophilized from 0.22µm filtered solution in 25mM Tris, 100mM NaCl, 1mM MgCl ₂ (pH 7.5). Normally 8% trehalose is added as protectant before lyophilization.
Reconstitution	Centrifuge the tube before opening. Reconstituting to a concentration more than 100 µg/ml is recommended. Dissolve the lyophilized protein in distilled water.
Storage	-20 to -80°C for 12 months as supplied from date of receipt. -20 to -80°C for 3-6 months in unopened state after reconstitution. 2-8°C for 2-7 days after reconstitution. Recommend to aliquot the protein into smaller quantities for optimal storage. Please minimize freeze-thaw cycles.

Background

Alkaline phosphatase can be considered "our favorite enzyme" for reasons apparent to those who diagnose and treat metabolic bone diseases or who study skeletal biology. Few might know, however, that alkaline phosphatase likely represents the most frequently assayed enzyme in all of medicine. Elevated activity in the circulation is universally recognized as a marker for skeletal or hepatobiliary disease.

Assay Data

Tris-Bis PAGE

Mouse Alkaline Phosphatase (Germ type) on Tris-Bis PAGE under reduced condition. The purity is greater than 95%.

SEC-HPLC

The purity of Mouse Alkaline Phosphatase (Germ type) is greater than 95% as determined by SEC-HPLC.
