

Mouse DR6/TNFRSF21 Protein

Cat. No. DR6-MM101

Description	
Source	Recombinant Mouse DR6/TNFRSF21 Protein is expressed from HEK293 with His tag at the C-Terminus. It contains Gln42-His349.
Accession	Q9EPU5
Molecular Weight	The protein has a predicted MW of 34.4 kDa. Due to glycosylation, the protein migrates to 70-80 kDa based on Bis-Tris PAGE result.
Endotoxin	Less than 1 EU per µg by the LAL method.
Purity	> 95% as determined by Bis-Tris PAGE

Formulation and Storage	
Formulation	Supplied as 0.22µm filtered solution in PBS (pH 7.4).
Storage	Valid for 12 months from date of receipt when stored at -80°C. Recommend to aliquot the protein into smaller quantities for optimal storage. Please minimize freeze-thaw cycles.

Background	
beta-amyloid precursor protein (APP) and death receptor 6 (DR6, also known as TNFRSF21) activate a widespread caspase-dependent self-destruction program. DR6 is broadly expressed by developing neurons, and is required for normal cell body death and axonal pruning both in vivo and after trophic-factor deprivation in vitro.DR6 is activated locally by an inactive surface ligand(s) that is released in an active form after trophic-factor deprivation.	

Assay Data

Bis-Tris PAGE

Mouse DR6 on Bis-Tris PAGE under reduced condition. The purity is greater than 95%.
