

# Hamster FGF21 Protein

Cat. No. FGF-HM12T

## Description

<b>Source</b>	Recombinant Hamster FGF21 Protein is expressed from HEK293 with His tag at the C-Terminus. It contains Arg29-Ser209.
<b>Accession</b>	XP_005084765.1
<b>Molecular Weight</b>	The protein has a predicted MW of 20.80 kDa. Due to glycosylation, the protein migrates to 21-30 kDa based on Bis-Tris PAGE result.
<b>Endotoxin</b>	Less than 1EU per $\mu\text{g}$ by the LAL method.
<b>Purity</b>	> 95% as determined by Bis-Tris PAGE > 90% as determined by HPLC

## Formulation and Storage

<b>Formulation</b>	Lyophilized from 0.22 $\mu\text{m}$ filtered solution in PBS (pH 7.4). Normally 8% trehalose is added as protectant before lyophilization.
<b>Reconstitution</b>	Centrifuge the tube before opening. Reconstituting to a concentration more than 100 $\mu\text{g}/\text{ml}$ is recommended. Dissolve the lyophilized protein in distilled water.
<b>Storage</b>	-20 to -80°C for 12 months as supplied from date of receipt. -80°C for 3 months after reconstitution. Recommend to aliquot the protein into smaller quantities for optimal storage. Please minimize freeze-thaw cycles.

## Background

Fibroblast growth factor 21 (FGF21) is a peptide hormone that is synthesized by several organs and regulates energy homeostasis. Excitement surrounding this relatively recently identified hormone is based on the documented metabolic beneficial effects of FGF21, which include weight loss and improved glycemia.

## Assay Data

### Bis-Tris PAGE

Hamster FGF21 on Bis-Tris PAGE under reduced condition. The purity is greater than 95%.

### SEC-HPLC

Assay Data

The purity of Hamster FGF21 is greater than 90% as determined by SEC-HPLC.

SPR Data

Hamster FGF21, His Tag immobilized on CM5 Chip can bind Human Beta Klotho, His Tag with an affinity constant of 264.50 nM as determined in SPR assay (Biacore T200).
