

Biotinylated Human FGF-7/KGF Protein (Primary Amine Labeling)

Cat. No. KGF-HE101B

Description

Source	Recombinant Biotinylated Human FGF-7/KGF Protein (Primary Amine Labeling) is expressed from E.coli with His tag at the N-terminal. It contains Cys32-Thr194.
Accession	P21781-1
Molecular Weight	The protein has a predicted MW of 20.1 kDa same as Tris-Bis PAGE result.
Endotoxin	Less than 1EU per ug by the LAL method.
Purity	> 95% as determined by Tris-Bis PAGE > 95% as determined by HPLC

Formulation and Storage

Formulation	Supplied as 0.22µm filtered solution in 50mM Tris, 250mM NaCl (pH 7.5). Please dilute to the desired concentration according to the concentration of the solution shown on the product label.
Storage	Valid for 12 months from date of receipt when stored at -80°C. Recommend to aliquot the protein into smaller quantities for optimal storage. Please do not repeated freeze-thaw cycles.

Background

The expression patterns of mRNAs encoding Fibroblast Growth Factor-7 (FGF-7) and its high affinity receptor suggested that FGF-7 signaling may play a role in regulating ureteric bud growth. Results of these studies demonstrate that the developing ureteric bud and mature collecting system of FGF-7-null kidneys is markedly smaller than wild type. FGF-7 levels modulate the extent of ureteric bud growth during development and the number of nephrons that eventually form in the kidney.

Assay Data

Tris-Bis PAGE

Biotinylated Human FGF-7/KGF on Tris-Bis PAGE under reduced condition. The purity is greater than 95%.

SEC-HPLC

The purity of Biotinylated Human FGF-7/KGF is greater than 95% as determined by SEC-HPLC.
