## Background

Peptidylarginine deiminase type4 (PADI4) was firstly identified as a non-MHC RA genetic risk factor. Furthermore, PADI4 risk allele possessed the association with bone damage regardless of anti citrullinated peptide antibody (ACPA) positivity in Asian RA patients. PADI4 gene codes PAD4 protein which has post-translational modification activity (citrullination). Padi4 is mainly expressed in myeloid cells and granulocytes.

## Assay Data

### Bis-Tris PAGE

Biotinylated Cynomolgus PADI4 (Primary Amine Labeling) on Bis-Tris PAGE under reduced condition. The purity is greater than 95%.
