Human SPP1/OPN Protein

Cat. No. SPP-HM101

ϗͶͼͻ·Ͷϩ

Recombinant Human SPP1/OPN Protein is expressed from HEK293 with His tag at the C-Terminus.
It contains Ile17-Asn300.
NP_000573.1
The protein has a predicted MW of 34.8 kDa. Due to glycosylation, the protein migrates to 50-60 kDa based on Tris-Bis PAGE result.
Less than 1EU per µg by the LAL method.
> 95% as determined by Tris-Bis PAGE
> 95% as determined by HPLC
ge
Lyophilized from 0.22µm filtered solution in PBS (pH 7.4). Normally 8% trehalose is added as protectant before lyophilization.
Centrifuge the tube before opening. Reconstituting to a concentration more than 100 µg/ml is recommended. Dissolve the lyophilized protein in distilled water.
-20 to -80°C for 12 months as supplied from date of receipt20 to -80°C for 3-6 months in unopened state after reconstitution.2-8°C for 2-7 days after reconstitution.Recommend to aliquot the protein into smaller quantities for optimal storage. Please minimize freeze-thaw cycles.
Ovarian cancer is one of the most lethal malignant tumors in women. Secreted phosphoprotein 1 (SPP1) plays an important role in some cancer types. The expression of SPP1 was higher in epithelial ovarian cancer tissues than in normal ovarian tissues. Silencing SPP1 decreased the cell proliferation, migration, and invasion. Ectopic expression of SPP1 increased the cell proliferation, migration, and invasion. Silencing SPP1 prevented ovarian cancer growth in mice. Silencing SPP1 inhibited Integrin β 1/FAK/AKT pathway.

Assay Data

Tris-Bis PAGE

Human SPP1 on Tris-Bis PAGE under reduced condition. The purity is greater than 95%.

SEC-HPLC

Human SPP1/OPN Protein

Cat. No. SPP-HM101

Assay Data

The purity of Human SPP1 is greater than 95% as determined by SEC-HPLC.
